## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-5 drawn to apparatus, interior permanent magnet rotor, classified in class 310, subclass 156.53.
- II. Claim 6-14, drawn to metal working, method of mechanical manufacturing (motor), classified in class 29, subclass 596.
- III. Claim 26-35, and 10-11 drawn to apparatus, Laser Irradiator, classified in class 372, subclass 1.
- IV. Claim 15-25, drawn to metal working, method of metal heating, classified in class 219, subclass 50.

The inventions are distinct, each from the other because of the following reasons:

Inventions I is related as apparatus of interior permanent magnet rotor, invention II is related as process for its manufacturing, invention II is related as apparatus of laser irradiator and invention II is related as method of using laser peening apparatus. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case, the process as claimed in group II can be practiced by another materially different apparatus such as bridge in synchronous reluctance motor, apparatus in group III is different apparatus from group I (laser vs. motor) and group IV is the process of using laser with group III apparatus.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John K. Kim whose telephone number is (571) 270-5072. The examiner can normally be reached on M-F 8-5.
